Project Requirements

Jared Coones Memorial Pumpkin 5k Run/Walk asked the team to rebuild their current site with a more modern look and feel. This site is utilized to provide information to participants regarding the organization and information regarding the annual 5k. This site needs to be a multipage that provides as much detail on their organization as possible. Client would like to keep the page feeling more family friendly-like. One specific need they expressed was to better organize that data that is being displayed to the users.

This application required two levels of users, the administrator, and the anonymous user. The anonymous user should have the ability to see all the pages in a read-only format. The administrator will need access to all the pages along with full CRUD access.
